

If links don't work, please download this PDF and open it using a PDF reader

| Technology / Library | Version | Documentation | Extra Info |
|----------------------|--------------|----------------------|--|
| Vue.js | 2.6.11 | Link | We are only using standard features of Vue.js, no Vuex or Vue router. |
| Vuelidate | 0.7.5 | Link | Used to validate all forms in real time. In CalendarAddWorkoutForm.vue we also use a custom made validator function which is one of the more advanced features of Vuelidate. |
| BootstrapVue | 2.11.0 | Link | Most of the frontend layout is built using the bootstrap-vue components (ex. b-button). There are exceptions where classic bootstrap syntax is used instead like divs with a bunch of bootstrap classes. |
| Bootstrap | 4.4.1 | Link | |
| Echarts | 4.7.0 | Link | We chose to use this chart-library since it is open source and extremely flexible. |
| vue-echarts | 5.0.0-beta.0 | Link | A Vue wrapper for the echarts-library. |
| Axios | 0.19.2 | Link | Our chosen request library. |
| weeknumber | 1.1.2 | Link | A simple library which has functions for obtaining week numbers which sadly is not in javascript to begin with. |
| ----- | ----- | Backend----- | ----- --- |
| Flask | 1.1.1 | Link | Web development framework for Python. |
| bcrypt | 3.1.7 | Link | Library that is used to encrypt our passwords. |
| Flask-Cors | 3.0.8 | Link | A Flask extension for handling Cross Origin Resource Sharing (CORS), making cross-origin AJAX possible. |
| pymongo | 3.10.1 | Link | PyMongo is a Python distribution containing tools for working with MongoDB , and is the recommended way to work with MongoDB from Python. |
| requests | 2.18.4 | Link | Simple HTTP library for python. |
